

Spinlist

The complete DJ & Host guide

Live song voting · Wedding planner · DJ teams · Gig window

What's inside

1. Getting started
2. Your plan & billing
3. Running an event (live song voting)
4. Exporting your setlist (PDF, CSV & Spotify)
5. Branding your events
6. The Wedding Planner
7. Song-choice deadlines (lock dates)
8. The questionnaire
9. Notifications
10. The Gig Window
11. Your DJ team (multi-operator)
12. Email invites (Resend)
13. Quick troubleshooting

1. Getting started

Spinlist lets your guests vote for the songs they want to hear, live, from their phones — and gives you a ranked list to play from. It also includes a full wedding planner for your wedding bookings.

Create your account

- 1 Go to www.spinlist.co.uk and sign up with your email and a password.
- 2 You start on a free trial that lets you create up to two events so you can try everything.
- 3 When you're ready, choose a plan from the Pricing page (see the next section).

Tip

Everything you make — events, weddings, branding — lives under your account. Log in from any device to pick up where you left off.

2. Your plan & billing

Spinlist has four paid tiers. You can upgrade, downgrade or cancel any time from **Account > Manage billing**.

Plan	Best for	Key features
BASIC	Solo DJs starting out	Custom branding · PDF setlist export
PRO	Working DJs	Everything in Basic · Export setlist to CSV · Spotify export
PRO WEDDING	Wedding DJs	Everything in Pro · Full wedding planner · Email invites
PRO WEDDING MULTI-OP	DJ agencies / teams	Everything in Pro Wedding · Add & assign sub-DJs

Payments are handled securely by Stripe. If you're given a complimentary or add-on code, redeem it under **Account > Redeem a code**.

3. Running an event (live song voting)

Create the event

- 1 From the home screen, tap **Create an event**.
- 2 Give it a name, pick the type (wedding, birthday, party, etc.) and set the date.
- 3 Choose how many votes each guest gets and, if you like, a voting deadline.
- 4 Save — you'll land on the host dashboard for that event.

Get guests voting

- Share the event's **QR code or link** — guests scan it, no app or login needed.
- Guests search live from Spotify's catalogue and vote for the tracks they want.
- Your **leaderboard** ranks songs by votes in real time, so you always know the room.

On the night

- Work down the ranked list, marking songs **played** as you go.
- Guests can keep requesting throughout — the list stays live.
- Lock or close voting whenever you want the list to stop changing.

Guest requests

Turn on live guest requests so people can suggest tracks on the fly. You'll see who requested what, and can mark requests played once you drop them.

4. Exporting your setlist

- **PDF setlist** — a clean, branded run-sheet of the voted songs (all paid tiers).
- **CSV export** — a spreadsheet of the setlist for your records (Pro and above).
- **Spotify export** — push the voted songs straight into a new Spotify playlist (Pro and above; connect Spotify under Account first).

Branded PDFs

Your event PDF automatically uses your brand colour, logo and tagline in the header. If a sub-DJ runs the event, it still uses **your** company branding, so everything you hand over looks consistent.

5. Branding your events

Under **Account > Branding** you can set:

- Your **logo** (shown on guest pages and PDF exports).
- An **accent colour** that themes your guest voting page and PDF headers.
- A short **tagline**.

Branding is available on all paid tiers and follows the event owner — so your whole team produces consistently branded material.

6. The Wedding Planner

Available on the Pro Wedding tiers, the planner gives you and the couple a shared space to build their day's music.

Set up a wedding

- 1 Create a wedding plan and give it the couple's names and wedding date.
- 2 Build **music blocks** (e.g. Ceremony, First Dance, Evening Party), each with a song capacity.
- 3 Add a **timeline** of the day and attach a **questionnaire** from your templates.
- 4 Share the invite **code or link** with the couple so they can log in and choose their songs.

The three tabs

- **[Music]** — song choices per block, searchable from Spotify.
- **[Timeline]** — the running order of the day.
- **[Questionnaire]** — key details you need from the couple.

Handy tools

- **Preview couple's view** — see exactly what the couple sees, read-only.
- **Edit answers** — fill in the questionnaire on the couple's behalf.
- **PDF run-sheet** — a branded schedule for the day, in your accent colour with your logo.
- **Your DJ card** — shows the couple who's DJing, with your photo, bio and links.
- **Per-block Spotify export** — push a single block's songs to its own playlist.

Couples get their own login

Couples sign up with your invite code and see a simple, focused version of the planner — just their music, timeline and questionnaire. No DJ tools, no clutter.

7. Song-choice deadlines (lock dates)

Give yourself time to prepare by setting a deadline after which the couple can no longer change their choices.

- Set a **Song choice deadline** on the wedding. By default it's **14 days before the wedding**.
- You can override it with your own date, or clear it entirely.
- After the deadline the couple can't edit songs, timeline or answers — but **you always can**.
- The couple sees a friendly reminder before, and a locked notice after.
- The deadline is included automatically when you copy the invite, so the couple knows.

8. The questionnaire

Build reusable questionnaire templates (up to five) under **Manage templates**. Question types include text, yes/no, single choice, checklist, and section headers.

- Attach a template to a wedding and the couple fills it in.
- Tick **[Gig window]** on any question to surface its answer in your live gig window (see section 10).
- You can edit the couple's answers yourself at any time.

Re-using templates

Changing a template's gig-window ticks updates your existing weddings automatically — no need to re-apply it to each one.

9. Notifications

Stay on top of what your couples are doing. When a couple updates their songs, timeline or answers, you're notified.

- A **bell icon** in the planner shows a running history of couple activity.
- You'll also get a quick pop-up when you open the planner if there's new activity.
- Notifications go to the wedding's owner account, so log in as the account that owns the wedding to see them.

10. The Gig Window

The gig window is your at-a-glance control panel for the night — the key details, the running order and the music, all in one floating window you can keep beside your decks.

Opening it

- In a wedding, tap **[Gig window]** — it opens as its own pop-out window you can drag to a second screen.
- It stays logged in and refreshes itself during the night.

Three tabs

- **[Info]** — the questionnaire answers you flagged for the gig. Tap any field to fill in details you learn on the night (e.g. the best man's name).
- **[Timeline]** — the running order.
- **[Music]** — each block's songs. Tap a song to mark it **played ✓**, and use the **[copy]** button to copy the title & artist straight into your DJ software.

Keeping it on top

- In **Chrome or Edge**, use **[Float on top]** for a true always-on-top window.
- In **Safari**, it opens as a normal pop-out — use a free Mac utility such as **WindowPin**, **Floaty** or **TopWindow** to pin it above your DJ software.
- Both you and any assigned sub-DJ can view and edit the gig window.

Full-screen note

If your DJ software runs in full-screen, a pinned window can't float above it. Keep the DJ app in a normal (windowed) mode so the gig window stays visible.

11. Your DJ team (multi-operator)

On the Pro Wedding Multi-Op tier you can add other DJs to your team and assign them events and weddings.

Two ways to add a DJ

- **Create a login for them** — set a temporary password and Spinlist makes them a managed sub-account. Great for DJs who don't have their own account.
- **Link an existing account** — just enter their email and they're linked to your team; assigned jobs appear in their own events list.

Managing the team

- Give each DJ a profile — photo, bio, website links and a YouTube link — shown on the couple's 'Your DJ' card.
- **Assign** a wedding or event to a team DJ; it appears in their account and any run-sheet PDF still carries your company branding.
- **Copy invite** or **Email invite** to send a DJ their login details (find these inside **Edit** on each DJ).

Sub-accounts vs independent DJs

A managed sub-account can only run jobs you assign — it can't create its own events. If a DJ needs to run their own events too, ask us to make their account independent (they keep any plan and stay on your team).

12. Email invites (Resend)

On the wedding tiers you can send invite emails to couples, and login details to your DJs, from your own address by connecting a Resend account under **Account › Email invites**.

- Add your Resend API key and a verified 'from' address. Your key is stored securely and never shown again.
- Send a test email to check it's working.
- If you haven't connected Resend, the invite buttons simply open your own email app instead.

Setting up your own sending domain in Resend (verifying DNS records) is a one-time task done in your Resend dashboard.

13. Quick troubleshooting

If...	Try this
A guest can't vote	Check voting isn't locked or past its deadline, and that they're on the current link/QR.
Branding isn't on my PDF	Make sure your logo and colour are set under Account > Branding.
The gig window is empty	Tick [Gig window] on your questionnaire questions and save the template.
I'm not getting notifications	Log in as the account that owns the wedding — notifications go to the owner.
A DJ can't create events	Sub-accounts only run assigned jobs. Ask us to make them independent.
Pop-out gig window is blocked	Allow pop-ups for spinlist.co.uk in your browser.
Can't send email invites	Connect Resend under Account, or the button will use your own email app.

Need a hand? Get in touch through the **Contact** page on spinlist.co.uk.
